Preface to the Second German Edition vi

Preface to the First German Edition vii

Historical Introduction 1

Chronological Table 6

Part A. Elements of Function Theory

Chapter 0. Complex Numbers and Continuous Functions 9

§1. The field $\mathbb{C}$ of complex numbers 10
1. The field $\mathbb{C}$ — 2. $\mathbb{R}$-linear and $\mathbb{C}$-linear mappings $\mathbb{C} \to \mathbb{C}$ — 3. Scalar product and absolute value — 4. Angle-preserving mappings

§2. Fundamental topological concepts 17
1. Metric spaces — 2. Open and closed sets — 3. Convergent sequences. Cluster points — 4. Historical remarks on the convergence concept — 5. Compact sets

§3. Convergent sequences of complex numbers 22
1. Rules of calculation — 2. Cauchy's convergence criterion. Characterization of compact sets in $\mathbb{C}$

§4. Convergent and absolutely convergent series 26
1. Convergent series of complex numbers — 2. Absolutely convergent series — 3. The rearrangement theorem — 4. Historical remarks on absolute convergence — 5. Remarks on Riemann's rearrangement theorem — 6. A theorem on products of series

§5. Continuous functions 34
1. The continuity concept — 2. The $\mathbb{C}$-algebra $\mathcal{C}(X)$ — 3. Historical remarks on the concept of function — 4. Historical remarks on the concept of continuity

§6. Connected spaces. Regions in $\mathbb{C}$ 39
1. Locally constant functions. Connectedness concept — 2. Paths and path connectedness — 3. Regions in $\mathbb{C}$ — 4. Connected components of domains — 5. Boundaries and distance to the boundary

Chapter 1. Complex-Differential Calculus 45

§1. Complex-differentiable functions 47
1. Complex-differentiability — 2. The Cauchy-Riemann differential equations — 3. Historical remarks on the Cauchy-Riemann differential equations

§2. Complex and real differentiability 50
1. Characterization of complex-differentiable functions — 2. A sufficiency criterion for complex-differentiability — 3. Examples involving the Cauchy-Riemann equations — 4*. Harmonic functions

§3. Holomorphic functions 56
1. Differentiation rules — 2. The $\mathbb{C}$-algebra $\mathcal{O}(D)$ — 3. Characterization of locally constant functions — 4. Historical remarks on notation

§4. Partial differentiation with respect to x, y, z and $\bar{z}$ 63
1. The partial derivatives $f_x, f_y, f_z, f_{\bar{z}}$ — 2. Relations among the derivatives $u_x, u_y, v_x, v_y, f_x, f_y, f_z, f_{\bar{z}}$ — 3. The Cauchy-Riemann differential equation $\frac{\partial f}{\partial \bar{z}} = 0$ — 4. Calculus of the differential operators ∂ and $\overline{\partial}$

Chapter 2. Holomorphy and Conformality. Biholomorphic Mappings .. 71

§1. Holomorphic functions and angle-preserving mappings 72
1. Angle-preservation, holomorphy and anti-holomorphy — 2. Angle- and orientation-preservation, holomorphy — 3. Geometric significance of angle-preservation — 4. Two examples — 5. Historical remarks on conformality

§2. Biholomorphic mappings 80
1. Complex 2×2 matrices and biholomorphic mappings — 2. The biholomorphic Cayley mapping $\mathbb{H} \xrightarrow{\sim} \mathbb{E}$, $z \mapsto \frac{z-i}{z+i}$ — 3. Remarks on the Cayley mapping — 4*. Bijective holomorphic mappings of $\mathbb{H}$ and $\mathbb{E}$ onto the slit plane

§3. Automorphisms of the upper half-plane and the unit disc 85
1. Automorphisms of $\mathbb{H}$ — 2. Automorphisms of $\mathbb{E}$ — 3. The encryption $\eta\frac{z-w}{\overline{w}z-1}$ for automorphisms of $\mathbb{E}$ — 4. Homogeneity of $\mathbb{E}$ and $\mathbb{H}$

Chapter 3. Modes of Convergence in Function Theory 91

§1. Uniform, locally uniform and compact convergence 93
1. Uniform convergence — 2. Locally uniform convergence — 3. Compact convergence — 4. On the history of uniform convergence — 5*. Compact and continuous convergence

§2. Convergence criteria 101
1. Cauchy's convergence criterion — 2. Weierstrass' majorant criterion

§3. Normal convergence of series 104
1. Normal convergence — 2. Discussion of normal convergence — 3. Historical remarks on normal convergence

Chapter 4. Power Series 109

§1. Convergence criteria 110
1. Abel's convergence lemma — 2. Radius of convergence — 3. The CAUCHY-HADAMARD formula — 4. Ratio criterion — 5. On the history of convergent power series

§2. Examples of convergent power series 115
1. The exponential and trigonometric series. Euler's formula — 2. The logarithmic and arctangent series — 3. The binomial series — 4*. Convergence behavior on the boundary — 5*. Abel's continuity theorem

§3. Holomorphy of power series 123
1. Formal term-wise differentiation and integration — 2. Holomorphy of power series. The interchange theorem — 3. Historical remarks on term-wise differentiation of series — 4. Examples of holomorphic functions

§4. Structure of the algebra of convergent power series 128
1. The order function — 2. The theorem on units — 3. Normal form of a convergent power series — 4. Determination of all ideals

Chapter 5. Elementary Transcendental Functions 133

§1. The exponential and trigonometric functions 134
1. Characterization of $\exp z$ by its differential equation — 2. The addition theorem of the exponential function — 3. Remarks on the addition theorem — 4. Addition theorems for $\cos z$ and $\sin z$ — 5. Historical remarks on $\cos z$ and $\sin z$ — 6. Hyperbolic functions

§2. The epimorphism theorem for $\exp z$ and its consequences 141
1. Epimorphism theorem — 2. The equation $\ker(\exp) = 2\pi i\mathbb{Z}$ — 3. Periodicity of $\exp z$ — 4. Course of values, zeros, and periodicity of $\cos z$ and $\sin z$ — 5. Cotangent and tangent functions. Arctangent series — 6. The equation $e^{i\frac{\pi}{2}} = i$

§3. Polar coordinates, roots of unity and natural boundaries 148
1. Polar coordinates — 2. Roots of unity — 3. Singular points and natural boundaries — 4. Historical remarks about natural boundaries

§4. Logarithm functions 154
1. Definition and elementary properties — 2. Existence of logarithm functions — 3. The Euler sequence $(1 + z/n)^n$ — 4. Principal branch of the logarithm — 5. Historical remarks on logarithm functions in the complex domain

§5. Discussion of logarithm functions 160
1. On the identities $\log(wz) = \log w + \log z$ and $\log(\exp z) = z$ — 2. Logarithm and arctangent — 3. Power series. The NEWTON-ABEL formula — 4. The Riemann ζ-function

Part B. The Cauchy Theory

Chapter 6. Complex Integral Calculus 167

§0. Integration over real intervals 168
1. The integral concept. Rules of calculation and the standard estimate — 2. The fundamental theorem of the differential and integral calculus

§1. Path integrals in $\mathbb{C}$ 171
1. Continuous and piecewise continuously differentiable paths — 2. Integration along paths — 3. The integrals $\int_{\partial B}(\zeta - c)^n d\zeta$ — 4. On the history of integration in the complex plane — 5. Independence of parameterization — 6. Connection with real curvilinear integrals

§2. Properties of complex path integrals 178
1. Rules of calculation — 2. The standard estimate — 3. Interchange theorems — 4. The integral $\frac{1}{2\pi i}\int_{\partial B}\frac{d\zeta}{\zeta - z}$

§3. Path independence of integrals. Primitives 184
1. Primitives — 2. Remarks about primitives. An integrability criterion — 3. Integrability criterion for star-shaped regions

Chapter 7. The Integral Theorem, Integral Formula and Power Series Development 191

§1. The Cauchy Integral Theorem for star regions 192
1. Integral lemma of GOURSAT — 2. The Cauchy Integral Theorem for star regions — 3. On the history of the Integral Theorem — 4. On the history of the integral lemma — 5*. Real analysis proof of the integral lemma — 6*. The Fresnel integrals $\int_0^\infty \cos t^2 dt$, $\int_0^\infty \sin t^2 dt$

§2. Cauchy's Integral Formula for discs 201
1. A sharper version of Cauchy's Integral Theorem for star regions — 2. The Cauchy Integral Formula for discs — 3. Historical remarks on the Integral Formula — 4*. The Cauchy integral formula for continuously real-differentiable functions — 5*. Schwarz' integral formula

§3. The development of holomorphic functions into power series 208
1. Lemma on developability — 2. The CAUCHY-TAYLOR representation theorem — 3. Historical remarks on the representation theorem — 4. The Riemann continuation theorem — 5. Historical remarks on the Riemann continuation theorem

§4. Discussion of the representation theorem 214
1. Holomorphy and complex-differentiability of every order — 2. The rearrangement theorem — 3. Analytic continuation — 4. The product theorem for power series — 5. Determination of radii of convergence

§5*. Special Taylor series. Bernoulli numbers 220
1. The Taylor series of $z(e^z - 1)^{-1}$. Bernoulli numbers — 2. The Taylor series of $z \cot z$, $\tan z$ and $\frac{z}{\sin z}$ — 3. Sums of powers and Bernoulli numbers — 4. Bernoulli polynomials

Part C. Cauchy-Weierstrass-Riemann Function Theory

Chapter 8. Fundamental Theorems about Holomorphic Functions 227

§1. The Identity Theorem 227
1. The Identity Theorem — 2. On the history of the Identity Theorem — 3. Discreteness and countability of the a-places — 4. Order of a zero and multiplicity at a point — 5. Existence of singular points

§2. The concept of holomorphy 236
1. Holomorphy, local integrability and convergent power series — 2. The holomorphy of integrals — 3. Holomorphy, angle- and orientation-preservation (final formulation) — 4. The Cauchy, Riemann and Weierstrass points of view. Weierstrass' creed

§3. The Cauchy estimates and inequalities for Taylor coefficients ... 241
1. The Cauchy estimates for derivatives in discs — 2. The Gutzmer formula and the maximum principle — 3. Entire functions. LIOUVILLE's theorem — 4. Historical remarks on the Cauchy inequalities and the theorem of LIOUVILLE — 5*. Proof of the Cauchy inequalities following WEIERSTRASS

§4. Convergence theorems of WEIERSTRASS 248
1. Weierstrass' convergence theorem — 2. Differentiation of series. Weierstrass' double series theorem — 3. On the history of the convergence theorems — 4. A convergence theorem for sequences of primitives — 5*. A remark of WEIERSTRASS' on holomorphy — 6*. A construction of WEIERSTRASS'

§5. The open mapping theorem and the maximum principle 256
1. Open Mapping Theorem — 2. The maximum principle — 3. On the history of the maximum principle — 4. Sharpening the WEIERSTRASS convergence theorem — 5. The theorem of HURWITZ

Chapter 9. Miscellany 265

§1. The fundamental theorem of algebra 265
1. The fundamental theorem of algebra — 2. Four proofs of the fundamental theorem — 3. Theorem of GAUSS about the location of the zeros of derivatives

§2. Schwarz' lemma and the groups Aut $\mathbb{E}$, Aut $\mathbb{H}$ 269
1. Schwarz' lemma — 2. Automorphisms of $\mathbb{E}$ fixing 0. The groups Aut $\mathbb{E}$ and Aut $\mathbb{H}$ — 3. Fixed points of automorphisms — 4. On the history of Schwarz' lemma — 5. Theorem of STUDY

§3. Holomorphic logarithms and holomorphic roots 276
1. Logarithmic derivative. Existence lemma — 2. Homologically simply-connected domains. Existence of holomorphic logarithm functions — 3. Holomorphic root functions — 4. The equation $f(z) = f(c) \exp \int_\gamma \frac{f'(\zeta)}{f(\zeta)} d\zeta$ — 5. The power of square-roots

§4. Biholomorphic mappings. Local normal forms 281
1. Biholomorphy criterion — 2. Local injectivity and locally biholomorphic mappings — 3. The local normal form — 4. Geometric interpretation of the local normal form — 5. Compositional factorization of holomorphic functions

§5. General Cauchy theory 287
1. The index function $\mathrm{ind}_\gamma(z)$ — 2. The principal theorem of the Cauchy theory — 3. Proof of iii) ⇒ ii) after DIXON — 4. Nullhomology. Characterization of homologically simply-connected domains

§6*. Asymptotic power series developments 293
1. Definition and elementary properties — 2. A sufficient condition for the existence of asymptotic developments — 3. Asymptotic developments and differentiation — 4. The theorem of RITT — 5. Theorem of É. BOREL

Chapter 10. Isolated Singularities. Meromorphic Functions 303

§1. Isolated singularities 303
1. Removable singularities. Poles — 2. Development of functions about poles — 3. Essential singularities. Theorem of CASORATI and WEIERSTRASS — 4. Historical remarks on the characterization of isolated singularities

§2*. Automorphisms of punctured domains 310
1. Isolated singularities of holomorphic injections — 2. The groups $\mathrm{Aut}\,\mathbb{C}$ and $\mathrm{Aut}\,\mathbb{C}^\times$ — 3. Automorphisms of punctured bounded domains — 4. Conformally rigid regions

§3. Meromorphic functions 315
1. Definition of meromorphy — 2. The $\mathbb{C}$-algebra $\mathcal{M}(D)$ of the meromorphic functions in D — 3. Division of meromorphic functions — 4. The order function o_c

Chapter 11. Convergent Series of Meromorphic Functions 321

§1. General convergence theory 321
1. Compact and normal convergence — 2. Rules of calculation — 3. Examples

§2. The partial fraction development of $\pi \cot \pi z$ 325
1. The cotangent and its double-angle formula. The identity $\pi \cot \pi z = \varepsilon_1(z)$ — 2. Historical remarks on the cotangent series and its proof — 3. Partial fraction series for $\frac{\pi^2}{\sin^2 \pi z}$ and $\frac{\pi}{\sin \pi z}$ — 4*. Characterizations of the cotangent by its addition theorem and by its differential equation

§3. The Euler formulas for $\sum_{\nu\geq 1}\nu^{-2n}$ 331
1. Development of $\varepsilon_1(z)$ around 0 and Euler's formulas for $\zeta(2n)$ — 2. Historical remarks on the Euler $\zeta(2n)$-formulas — 3. The differential equation for ε_1 and an identity for the Bernoulli numbers — 4. The Eisenstein series $\varepsilon_k(z) := \sum_{-\infty}^{\infty}\frac{1}{(z+\nu)^k}$

§4*. The EISENSTEIN theory of the trigonometric functions 335
1. The addition theorem — 2. Eisenstein's basic formulas — 3. More Eisenstein formulas and the identity $\varepsilon_1(z) = \pi\cot\pi z$ — 4. Sketch of the theory of the circular functions according to EISENSTEIN

Chapter 12. Laurent Series and Fourier Series 343

§1. Holomorphic functions in annuli and Laurent series 343
1. Cauchy theory for annuli — 2. Laurent representation in annuli — 3. Laurent expansions — 4. Examples — 5. Historical remarks on the theorem of LAURENT — 6*. Derivation of LAURENT's theorem from the CAUCHY-TAYLOR theorem

§2. Properties of Laurent series 356
1. Convergence and identity theorems — 2. The Gutzmer formula and Cauchy inequalities — 3. Characterization of isolated singularities

§3. Periodic holomorphic functions and Fourier series 361
1. Strips and annuli — 2. Periodic holomorphic functions in strips — 3. The Fourier development in strips — 4. Examples — 5. Historical remarks on Fourier series

§4. The theta function 365
1. The convergence theorem — 2. Construction of doubly periodic functions — 3. The Fourier series of $e^{-z^2\pi\tau}\theta(i\tau z,\tau)$ — 4. Transformation formulas for the theta function — 5. Historical remarks on the theta function — 6. Concerning the error integral

Chapter 13. The Residue Calculus 377

§1. The residue theorem 377
1. Simply closed paths — 2. The residue — 3. Examples — 4. The residue theorem — 5. Historical remarks on the residue theorem

§2. Consequences of the residue theorem 387
1. The integral $\frac{1}{2\pi i}\int_\gamma F(\zeta)\frac{f'(\zeta)}{f(\zeta)-a}d\zeta$ — 2. A counting formula for the zeros and poles — 3. ROUCHÉ's theorem

Chapter 14. Definite Integrals and the Residue Calculus 395

§1. Calculation of integrals 395
0. Improper integrals — 1. Trigonometric integrals $\int_0^{2\pi} R(\cos\varphi, \sin\varphi)d\varphi$ — 2. Improper integrals $\int_{-\infty}^{\infty} f(x)dx$ — 3. The integral $\int_0^{\infty} \frac{x^{m-1}}{1+x^n}dx$ for $m, n \in \mathbb{N}$, $0 < m < n$

§2. Further evaluation of integrals 401
1. Improper integrals $\int_{-\infty}^{\infty} g(x)e^{iax}dx$ — 2. Improper integrals $\int_0^{\infty} q(x)$ $x^{a-1}dx$ — 3. The integrals $\int_0^{\infty} \frac{\sin^n x}{x^n}dx$

§3. Gauss sums 409
1. Estimation of $\frac{e^{uz}}{e^z-1}$ for $0 \leq u \leq 1$ — 2. Calculation of the Gauss sums $G_n := \sum_0^{n-1} e^{\frac{2\pi i}{n}\nu^2}$, $n \geq 1$ — 3. Direct residue-theoretic proof of the formula $\int_{-\infty}^{\infty} e^{-t^2}dt = \sqrt{\pi}$ — 4. Fourier series of the Bernoulli polynomials

Short Biographies of ABEL, CAUCHY, EISENSTEIN, EULER, RIEMANN *and* WEIERSTRASS 417
