
Contents

1	Introduction	1
1.1	Application Fields	2
1.2	From the Real Scene to the Computer Generated Image	4
1.3	Rendering and Rendering Pipeline	6
1.4	Objectives of This Book and Recommended Reading Order for the Sections	9
1.5	Structure of This Book	11
1.6	Exercises	12
	References	13
2	The Open Graphics Library (OpenGL)	15
2.1	Graphics Programming Interfaces	15
2.2	General About the OpenGL	17
2.3	The OpenGL and Java	19
2.4	Profiles	19
2.5	OpenGL Graphics Pipelines	21
2.5.1	Vertex Processing	21
2.5.2	Vertex Post-Processing	23
2.5.3	Primitive Assembly	23
2.5.4	Rasterisation	24
2.5.5	Fragment Processing	26
2.5.6	Per-Fragment Operations	26
2.5.7	Framebuffer	29
2.6	Shaders	29
2.7	OpenGL Programming with JOGL	33
2.8	Example of a JOGL Program Without Shaders	36
2.9	Programming Shaders	40
2.9.1	Data Flow in the Programmable Pipeline	40
2.9.2	OpenGL and GLSL Versions	43
2.9.3	OpenGL Extensions	43
2.9.4	Functions of the GLSL	44
2.9.5	Building a GLSL Shader Program	46

2.10	Example of a JOGL Program Using GLSL Shaders	48
2.11	Efficiency of Different Drawing Methods	57
2.12	Exercises	59
	References	61
3	Basic Geometric Objects	63
3.1	Surface Modelling	63
3.2	Basic Geometric Objects in the OpenGL	67
3.2.1	Points	67
3.2.2	Lines	71
3.2.3	Triangles	73
3.2.4	Polygon Orientation and Filling	75
3.2.5	Polygons	77
3.2.6	Quadrilaterals	79
3.3	OpenGL Drawing Commands	81
3.3.1	Indexed Draw	82
3.3.2	Triangle Strips	85
3.3.3	Primitive Restart	87
3.3.4	Base Vertex and Instanced Rendering	89
3.3.5	Indirect Draw	89
3.3.6	More Drawing Commands and Example Project	92
3.4	Exercises	92
	References	94
4	Modelling Three-Dimensional Objects	95
4.1	From the Real World to the Model	95
4.2	Three-Dimensional Objects and Their Surfaces	96
4.3	Modelling Techniques	99
4.4	Modelling the Surface of a Cube in the OpenGL	104
4.5	Surfaces as Functions in Two Variables	111
4.5.1	Representation of Landscapes	114
4.6	Parametric Curves and Freeform Surfaces	115
4.6.1	Parametric Curves	116
4.6.2	Efficient Computation of Polynomials	121
4.6.3	Freeform Surfaces	122
4.7	Normal Vectors for Surfaces	124
4.8	Exercises	126
	References	128
5	Geometry Processing	129
5.1	Geometric Transformations in 2D	129
5.1.1	Homogeneous Coordinates	133
5.1.2	Applications of Transformations	136
5.1.3	Animation and Movements Using Transformations	138
5.1.4	Interpolators for Continuous Changes	140

5.2	Geometrical Transformations in 3D	142
5.2.1	Translations	143
5.2.2	Scalings	144
5.2.3	Rotations Around x -, y - and z -Axis	144
5.2.4	Calculation of a Transformation Matrix with a Linear System of Equations	145
5.3	Switch Between Two Coordinate Systems	146
5.4	Scene Graphs	149
5.4.1	Modelling	149
5.4.2	Animation and Movement	152
5.4.3	Matrix Stacks and Their Application in the OpenGL	154
5.5	Arbitrary Rotations in 3D: Euler Angles, Gimbal Lock, and Quaternions	155
5.5.1	Rotation Around Any Axis	156
5.6	Eulerian Angles and Gimbal Lock	157
5.6.1	Quaternions	161
5.7	Clipping Volume	165
5.8	Orthogonal and Perspective Projections	168
5.9	Perspective Projection and Clipping Volume in the OpenGL	174
5.10	Viewing Pipeline: Coordinate System Change of the Graphical Pipeline	180
5.11	Transformations of the Normal Vectors	186
5.12	Transformations of the Viewing Pipeline in the OpenGL	187
5.13	Exercises	189
	References	192
6	Greyscale and Colour Representation	193
6.1	Greyscale Representation and Intensities	193
6.2	Colour Models and Colour Spaces	196
6.3	Colours in the OpenGL	204
6.4	Colour Interpolation	205
6.5	Exercises	208
	References	210
7	Rasterisation	211
7.1	Vector Graphics and Raster Graphics	211
7.2	Rasterisation in the Graphics Pipeline and Fragments	214
7.3	Rasterisation of Lines	216
7.3.1	Lines and Raster Graphics	216
7.3.2	Midpoint Algorithm for Lines According to Bresenham	218
7.3.3	Structural Algorithm for Lines According to Brons	225

	7.3.4	Midpoint Algorithm for Circles	228
	7.3.5	Drawing Arbitrary Curves	232
7.4		Parameters for Drawing Lines	233
	7.4.1	Fragment Density and Line Style	233
	7.4.2	Line Styles in the OpenGL	236
	7.4.3	Drawing Thick Lines	238
	7.4.4	Line Thickness in the OpenGL	240
7.5		Rasterisation and Filling of Areas	241
	7.5.1	Odd Parity Rule	242
	7.5.2	Scan Line Technique	243
	7.5.3	Polygon Rasterisation Algorithm According to Pineda	245
	7.5.4	Interpolation of Associated Data	250
	7.5.5	Rasterising and Filling Polygons in the OpenGL	253
7.6		Aliasing Effect and Antialiasing	254
	7.6.1	Examples of the Aliasing Effect	256
	7.6.2	Antialiasing	259
	7.6.3	Pre-Filtering	261
	7.6.4	Pre-Filtering in the OpenGL	264
	7.6.5	Post-Filtering	269
	7.6.6	Post-Filtering Algorithms	272
	7.6.7	Sample Arrangements for Post-Filtering	276
	7.6.8	Post-Filtering in the OpenGL	278
7.7		Exercises	283
		References	284
8		Visibility Considerations	287
	8.1	Line Clipping in 2D	287
		8.1.1 Cohen–Sutherland Clipping Algorithmus	289
		8.1.2 Cyrus–Beck Clipping Algorithmus	291
	8.2	Image-Space and Object-Space Methods	294
		8.2.1 Backface Culling	295
		8.2.2 Partitioning Methods	296
		8.2.3 The Depth Buffer Algorithm	297
		8.2.4 Scan-Line Algorithms	300
		8.2.5 Priority Algorithms	301
	8.3	Exercises	304
		References	304
9		Lighting Models	305
	9.1	Light Sources of Local Illumination	306
	9.2	Reflections by Phong	309
	9.3	The Lighting Model According to Phong in the OpenGL	320
	9.4	Shading	334
	9.5	Shading in the OpenGL	343
	9.6	Shadows	344

9.7	Opacity and Transparency	346
9.8	Radiosity Model	348
9.9	Raycasting and Raytracing	352
9.10	Exercises	356
	References	357
10	Textures	359
10.1	Texturing Process	359
10.1.1	Mipmap and Level of Detail: Variety in Miniature	367
10.1.2	Applications of Textures: Approximation of Light, Reflection, Shadow, Opacity and Geometry	369
10.2	Textures in the OpenGL	379
10.3	Exercises	387
	References	388
11	Special Effects and Virtual Reality	389
11.1	Factors for Good Virtual Reality Applications	389
11.2	Fog	391
11.3	Fog in the OpenGL	393
11.4	Particle Systems	398
11.5	A Particle System in the OpenGL	400
11.6	Dynamic Surfaces	405
11.7	Interaction and Object Selection	407
11.8	Object Selection in the OpenGL	413
11.9	Collision Detection	419
11.10	Collision Detection in the OpenGL	421
11.11	Auralisation of Acoustic Scenes	424
11.11.1	Acoustic Scenes	424
11.11.2	Localisability	426
11.11.3	Simulation	427
11.11.4	Reproduction Systems	429
11.11.5	Ambisonics	430
11.11.6	Interfaces and Standards	431
11.12	Spatial Vision and Stereoscopy	432
11.12.1	Perceptual Aspects of Spatial Vision	432
11.12.2	Stereoscopy Output Techniques	435
11.12.3	Stereoscopic Projections	440
11.12.4	Stereoscopy in the OpenGL	443
11.13	Exercises	454
	References	455
