Contents

Preface vii
Acknowledgment ix

Part I: Generalities

1. Thermodynamics and Equilibrium 3

1. Chemical Potential 3
2. Activity 4
3. Energy of a Cell Reaction 5
4. The Molar Reaction Gibbs Function $\Delta_r G$ – Equilibrium of the System 6
5. Nernst's law - Electrode Potentials 7
6. Chemical Equilibrium and Chemical Potentials 7

2. Recallings and Definitions Concerning the Electrochemical Cells 9

1. Terminology 9
2. Recallings Concerning the Electrochemical Cell 9
3. Characteristics of the Electrochemical Reactions 13

3. Present Views on the Interface Metal/Solution 15

1. Simplified Model of the Electrochemical Double-Layer 15
2. Other Models of the Double-Layer 16
3. Difference of Potential at the Level of the Double Layer 18
4. Consequences 18

4. More on the Potential of an Electrode 19

1. Absolute Potential of one Electrode: Its Measurement? 19
2. An Explanation 19
3. Measurement of the Changes of Absolute Potentials 20
4. Potential and Energy of the Electrons 21

5. Kinetics of the Electrode Reaction 23

1. Meaning of the Intensity 23
2. Notion of Energy of Activation of a Reaction 24
3. Rate of the Electrochemical Reactions 25

6. A Qualitative Study of the Current-Potential Curves 26

1. Definition of the Current-Potential Curves 26
2. Current-Potential Curves: Interpretation 28
3. Slow or Polarizable Systems and Rapid or Non-polarizable Systems 29
4. Current-potential Curves of Systems Perfectly Non-polarizable or Polarizable 31

7. Nernst's Equation–Electrode Potentials–Electrochemical Potentials **34**

1. Nernst's Law 34
2. Electrode Potentials 34
3. Electrochemical Potential 42
4. Looking Back 44

8. Equation of Butler–Volmer **45**

1. Some Factors Affecting Electrodic Reaction Rates and Current 45
2. Stationary Regime 46
3. Electrochemical Reaction Rates and Concentrations of the Forms Red and Ox Close to the Electrode 46
4. Expressions of the Butler–Volmer's Relations 48
5. A Few Comments Upon the Values of Some Kinetic Constants 50
6. Some Comments Relative to the Butler–Volmer's Equation 51
7. The Exchange Current i_o, a Quantitative Criterium of Reversibility of the Electrochemical System 52
8. Tafel's Straight Lines 53
9. Extensions of the Equation of Butler–Volmer—"Inadequacy" of the Equation of Butler–Volmer-Effect of Mass-transfer 54

9. Transport Phenomena in Solution: Diffusion **56**

1. The Phenomenon of Diffusion: First Fick's Law 56
2. A Presentation of the Phenomenon of Diffusion 57
3. Fick's Laws 58
4. Transport of the Electroactive Species Towards the Working Electrode During Electrolysis 60
5. Steady State 62

10. Limiting-Intensity-Real Current-Potential Curves-Consequences of the Stationary State of Activation-Diffusion **64**

1. The Limiting-Intensity 64
2. Real Current-Potential Curves 65
3. Equations of the Real Curves Intensity-Potential; Stationary Regime 67
4. Equations of the Real Curves Intensity-Potential—Regime Non-Stationary 68

11. Reversible and Irreversible Systems **70**

1. General Considerations 70
2. Place of the Concept of Reversibility in the Theoretical Study of the Electrochemical Methods of Analysis 72
5. On the Concept of Reversibility in Chemistry 73

12. Electrochemical Indicators **74**

1. General Aspects 74
2. Some Examples 76

13. Forecasting Electrochemical Reactions at the Electrodes **78**

1. Forecasting of Electrochemical Processes when the Charge-Transfer and the Transport of the Electro-Active Species are Infinitely Fast 78
2. Forecasting of Electrochemical Reactions when the Charge-Transfer Kinetics is Limitative 80

3. Forecastings When the Kinetics of Charge-Transfer and of the Transport are Both Slow 81

14. Forecasting Electrochemical Reactions in an Electrochemical Cell: Conditions of Electrolysis 84

1. The Electrochemical Reactions and the Displacement of the Species are Infinitely Fast 84
2. Using the Current-Potential Curves 85
3. Minimum of the Potential Difference to Apply for the Functioning of an Electrolysis cell 93

15. Transports by Migration 96

1. The Two Types of Conductors: the Metallic Conductors and the Ionic Ones 96
2. Conductivity of Solutions of Strong Electrolytes 100
3. Molar Conductivity of Ions at Infinite Dilution 101
4. Ionic Mobility 102
5. Equivalence Ionic Mobility: Molar Concentration 103
6. Transport Numbers 104

16. Current-Potential Curves During a Chemical Reaction 106

1. Qualitative Study 106
2. Quantitative Study 108

17. Techniques Based on Concept of Impedance: Impedance Spectroscopy 110

1. Impedance Spectroscopy 110
2. A Few Words About the Polarography 110
3. Followed Strategy 111
4. Equivalent Electrical Circuits 111
5. Equivalent Circuit of a Cell 111
6. Applying ac Impedance Methods to Study the Electrode Processes 112
7. The Example of an Impedance Constituted by a Resistor and a Capacitor in Series 112
8. Electrical Behavior of the Equivalent Circuit 113
9. Instrumentation 115
10. Applying ac Impedance Methods to Obtain Information on Electrode Processes 115
11. Interests of These Methods 115

Part II: Electrochemical Methods of Analysis

18. Conventional Polarography 119

1. General Aspects of the Method: Voltammetric Techniques 119
2. The Dropping Mercury Electrode (DME) 120
3. Notions Concerning the Equipment in Polarography 122
4. Theoretical Aspects 123
5. Influence of Different Factors on the Polarographic Current 127
6. Some Practical Aspects of the Polarography 128
7. Analytical Possibilities of the Method 133
8. The Polarography in the Domain of the Physical Chemistry 136
9. Some Examples of Applications 136

19. Pulse Voltammetry **140**

1. Residual Current and Capacitance Charging Current in Conventional Polarography 140
2. Pulse Polarographies 142
3. Apparatus 153
4. Analytical Characteristics of the Methods 153
5. Analytical Aspects of the Pulse Polarographies 154

20. Chronoamperometry **156**

1. Principle 156
2. Relation of Cottrell 157
3. Applications 158

21. Cyclic Voltammetry **159**

1. Generalities 159
2. Voltammetric Methods with a Linear Sweeping of Potential 159
3. Principle of Cyclic Voltammetry 160
4. Qualitative Description of the Phenomena 160
5. Theoretical Aspects 161
6. Applications of Cyclic Voltammetry 163
7. Difficulties in Cyclic Voltammetric Measurements 163

22. Voltammetric Methods by Redissolution: Stripping Analysis **164**

1. Anodic Stripping Voltammetry 164
2. Voltammetry by Cathodic Redissolution 168
3. Adsorptive Stripping Voltammetry 169

23. Voltammetry at Ultramicroelectrodes **171**

1. Kinds of Ultramicroelectrodes 171
2. Experimental Conditions of Use of the UMES and Theoretical Results 171
3. Conclusions 173

24. Amperometry **174**

1. Principle 174
2. Generalities 174
3. Amperometry with an Indicator Electrode and a Reference Electrode 175
4. Amperometry with two Indicator Electrodes or Biamperometry 189
5. Apparatus 196
6. Analytical Possibilities of the Amperometry 196
7. Some Examples of Applications 197

25. Conductometry **198**

1. Theoretical Recallings 198
2. Measurement of the Resistance and of the Conductivity of Solutions 199
3. Conductometric Titrations 200
4. Conductometry, a Linear Method of Titration 206
5. Characteristics of Conductometric Titrations 209
6. Conductometry in Physical Chemistry: Determination of Equilibrium Constants in Solution 209
7. Some Applications of Conductometry 210
8. Removal of the Migration Current 211

26. Generalities on Potentiometry **212**

1. General Principle of the Method 212
2. Instrumentation 221
3. Equilibrium Potential and Potential Taken by the Indicator Electrode 222

27. Definitions and PH Determination **223**

1. Definitions of pH and Consequences 223
2. Difficulty Inherent to the Formal Definition of pH 223
3. Operational Definition of pH 224
4. Determination of pH 226
5. Sensitive Electrodes to the Ions H^+ 226
6. The pH-meter 228

28. Potentiometry with Chemical Sensors: Ion Selective Electrodes (I.S.E) **230**

1. The Selective Electrodes: Some General Properties 230
2. Some Selective Electrodes 235

29. Potentiometric Titrations **247**

1. Principles 247
2. Titrations at Null Intensity with an Indicator Electrode and one of Reference 248
3. Potentiometric Titrations at Imposed Intensity 256
4. Practical Aspects 262
5. Some Characteristics of Potentiometric Titrations 264
6. Domains of Applications 264
7. Examples of Applications 265

30. Chronopotentiometry **266**

1. Different Types of Chronopotentiometry 266
2. Conditions of Use of the Technique 266
3. Theoretical Aspects; Sand's Equation 267
4. Analytical Applications of the Chronopotentiometry 268

31. Electrogravimetry—Separation by Electrolysis **271**

1. Generalities 271
2. Electrolysis at a Constant Current 273
3. Electrolysis at Controlled Potential 276

32. Coulometry **279**

1. Faraday's Laws 279
2. Conditions Required in Order to Achieve a Coulometric Determination 279
3. Direct Coulometry at Imposed Potential 280
4. Direct Coulometry at Constant Intensity 286
5. Coulometric Titrations 287
6. Superimposition of the Direct Coulometry at Constant Intensity and Coulometric Titration 289
7. Detection of the Equivalent Point of the Chemical Reaction 294
8. Back-Titration 297
9. Domains of Applications of the Indirect Coulometry at Constant Intensity 299
10. Characteristics of the Method 299
11. Applications 300

33. Chemical Sensors (Following) **301**

1. Some Elements of Bioanalytical Chemistry 301
2. Definition of the Chemical Sensors and Their Constitution 301
3. Classification of Chemical Sensors 303
4. Potentiometric Sensors 304
5. Faradaic (or Amperometric Sensors) 307
6. Conductometric Sensors 310
7. Photoelectrochemistry-Electrochemiluminescence 310
8. Characteristics that Must Possess the Sensors 311

34. Electrochemical Biosensors **313**

1. Generalities Concerning the Biosensors 313
2. Amperometric Biosensors 316
3. Potentiometric Biosensors 329
4. Conductometric Biosensors 330
5. Actual and Future Tendencies 333
6. Some Examples of Applications 334

35. Electrochemical Detectors in Liquid Chromatography **336**

1. The Different Detectors in Liquid Chromatography (LC) and The Electrochemical Detectors 336
2. General Schema of one Apparatus LCEC 338
3. Forced Convection, Hydrodynamic Phenomenon 338
4. Essential Conditions for a good Functioning of an Apparatus of LCED and Properties of an Ideal Electrochemical Detector 338
5. Amperometric Detectors 340
6. Coulometric Detectors 347
7. Devices Permitting to Improve the Selectivity—Detectors in Series and in Parallel 348
8. Potentiometric Detectors 349
9. Conductometric Detectors 350
10. Performance of Electrochemical Detectors 351
11. Electrochemical Detection and Liquid Chromatographies with Capillary Microcolumns (Ultraperformant Chromatography) 352
12. Domains of Applications and Derivatization 352
13. Some Applications 354
14. Electrochemical Detectors and Capillary Electrophoresis 355

Appendices

A1. Voltage Measurements **359**

A2. Obtention of the Butler–Volmer's Equation **362**

1. Generalities 362
2. Setting up the Butler–Volmer's equation 364

A3. Laplace Transforms **369**

1. Laplace Transforms in Brief 369
2. Laplace Transforms and Their Handling 369
3. Examples of Laplace Transforms 370

A4. Fick's Laws of Diffusion **371**

1. Supplementary Considerations About the Diffusion 371
2. Linear Diffusion-Fick's Second Law Linear Diffusion Semi-Infinity 372
3. Fick's Second Law. Radial Diffusion 373
4. Beginning of Resolution of the Partial Differential Equation of the Second Order (3) 374

A5. Fresnel's Rule **377**

A6. Cottrell's Equation and Extensions **378**

1. Cottrell's Equation 378
2. Extensions 381

A7. Polarography: Ilkowic's Equation **385**

1. Fast Electrochemical Systems 385
2. Lineary Dependence of the Limiting - Intensity with the Concentration of the Electroactive Substance in Conventional Polarography in the Case of a Slow System 387

A8. Quantitative Relationships in Pulse Differential Polarography **388**

1. Second Pulse 388
2. First Pulse 390

A9. Electrochemical Methods of Analysis Grounded on the Linear Sweeping of Potential Equation of Randles–Sevcik **391**

1. Reversible Systems 392
2. Irreversible and Quasi-Reversible Systems 394

A10. Elimination of the Migration Current **396**

1. Principle of the Demonstration 396
2. Some Examples 397
3. Suppression of the Transport of an Ion by Migration by Addition of a Support Electrolyte 399

A11. Potential of Liquid Junction: Eisenmann–Nikolskii's Relation **401**

1. Different Types of Liquid Junction 401
2. Calculation of the Potentials of Liquid Junction 402
3. Relation of Eisenmann-Nikolskii 406

A12. Henderson's Equation **408**

A13. Equation of Michaelis–Menten **410**

A14. Quantitative Aspects Applying to the Amperometric and Potentiometric Enzymatic Biosensors **412**

1. Theoretical Considerations Applicating to the Amperometric and Potentiometric Biosensors 412
2. Principle of Resolution of the Equations (1) and (2) 413
3. Amperometric Biocaptors 414
4. Potentiometric Biocaptors 414

General Bibliography **415**

Glossary Electrochemical **416**

Index **421**
