1	Introductory Developments	1
1.1	What Is Econometrics? Some Introductory Examples	1
1.1.1	Answers to Many Questions	1
1.1.2	The Example of Consumption and Income	2
1.1.3	The Answers to the Other Questions Asked	4
1.2	Model and Variable	7
1.2.1	The Concept of Model	7
1.2.2	Different Types of Data	9
1.2.3	Explained Variable/Explanatory Variable	9
1.2.4	Error Term	10
1.3	Statistics Reminders	11
1.3.1	Mean	11
1.3.2	Variance, Standard Deviation, and Covariance	11
1.3.3	Linear Correlation Coefficient	13
1.3.4	Empirical Application	15
1.4	A Brief Introduction to the Concept of Stationarity	17
1.4.1	Stationarity in the Mean	18
1.4.2	Stationarity in the Variance	20
1.4.3	Empirical Application: A Study of the Nikkei Index	21
1.5	Databases and Software	23
1.5.1	Databases	23
1.5.2	Econometric Software	25
	Conclusion	26
	The Gist of the Chapter	26
	Further Reading	26
2	The Simple Regression Model	27
2.1	General	27
2.1.1	The Linearity Assumption	27
2.1.2	Specification of the Simple Regression Model and Properties of the Error Term	29
2.1.3	Summary: Specification of the Simple Regression Model	32
2.2	The Ordinary Least Squares (OLS) Method	33
2.2.1	Objective and Reminder of Hypotheses	33

2.2.2	The OLS Principle	34
2.2.3	The OLS Estimators	35
2.2.4	Properties of OLS Estimators	47
2.2.5	OLS Estimator of the Variance of the Error Term	49
2.2.6	Empirical Application	50
2.3	Tests on the Regression Parameters	53
2.3.1	Determining the Distributions Followed by the OLS Estimators	53
2.3.2	Tests on the Regression Coefficients	57
2.3.3	Empirical Application	61
2.4	Analysis of Variance and Coefficient of Determination	64
2.4.1	Analysis of Variance (ANOVA)	64
2.4.2	Coefficient of Determination	66
2.4.3	Analysis of Variance and Significance Test of the Coefficient β	69
2.4.4	Empirical Application	71
2.5	Prediction	72
2.6	Some Extensions of the Simple Regression Model	75
2.6.1	Log-Linear Model	76
2.6.2	Semi-Log Model	77
2.6.3	Reciprocal Model	79
2.6.4	Log-Inverse or Log-Reciprocal Model	80
	Conclusion	81
	The Gist of the Chapter	82
	Further Reading	82
	Appendix 2.1: Demonstrations	83
	Appendix 2.2: Normal Distribution and Normality Test	97
	Appendix 2.3: The Maximum Likelihood Method	100
3	The Multiple Regression Model	105
3.1	Writing the Model in Matrix Form	105
3.2	The OLS Estimators	107
3.2.1	Assumptions of the Multiple Regression Model	107
3.2.2	Estimation of Coefficients	110
3.2.3	Properties of OLS Estimators	112
3.2.4	Error Variance Estimation	114
3.2.5	Example	114
3.3	Tests on the Regression Coefficients	117
3.3.1	Distribution of Estimators	117
3.3.2	Tests on a Regression Coefficient	118
3.3.3	Significance Tests of Several Coefficients	120
3.4	Analysis of Variance (ANOVA) and Adjusted Coefficient of Determination	123
3.4.1	Analysis-of-Variance Equation	123
3.4.2	Coefficient of Determination	125

3.4.3	Adjusted Coefficient of Determination	126
3.4.4	Partial Correlation Coefficient	127
3.4.5	Example	128
3.5	Some Examples of Cross-Sectional Applications	134
3.5.1	Determinants of Crime	134
3.5.2	Health Econometrics	135
3.5.3	Inequalities and Financial Openness	137
3.5.4	Inequality and Voting Behavior	139
3.6	Prediction	140
3.6.1	Determination of Predicted Value and Prediction Interval	140
3.6.2	Example	142
3.7	Model Comparison Criteria	143
3.7.1	Explanatory Power/Predictive Power of a Model	143
3.7.2	Coefficient of Determination and Adjusted Coefficient of Determination	144
3.7.3	Information Criteria	144
3.7.4	The Mallows Criterion	146
3.8	Empirical Application	147
3.8.1	Practical Calculation of the OLS Estimators	148
3.8.2	Software Estimation	150
	Conclusion	152
	The Gist of the Chapter	153
	Further Reading	153
	Appendix 3.1: Elements of Matrix Algebra	153
	Appendix 3.2: Demonstrations	160
4	Heteroskedasticity and Autocorrelation of Errors	171
4.1	The Generalized Least Squares (GLS) Estimators	172
4.1.1	Properties of OLS Estimators in the Presence of Autocorrelation and/or Heteroskedasticity	172
4.1.2	The Generalized Least Squares (GLS) Method	173
4.1.3	Estimation of the Variance of the Errors	175
4.2	Heteroskedasticity of Errors	176
4.2.1	The Sources of Heteroskedasticity	176
4.2.2	Estimation When There Is Heteroskedasticity	177
4.2.3	Detecting Heteroskedasticity	178
4.2.4	Estimation Procedures When There Is Heteroskedasticity ...	186
4.2.5	Empirical Application	189
4.3	Autocorrelation of Errors	194
4.3.1	Sources of Autocorrelation	194
4.3.2	Estimation When There Is Autocorrelation	198
4.3.3	Detecting Autocorrelation	201
4.3.4	Estimation Procedures in the Presence of Error Autocorrelation	211
4.3.5	Prediction in the Presence of Error Autocorrelation	216

4.3.6 Empirical Application	217
Conclusion	220
The Gist of the Chapter	221
Further Reading	221
5 Problems with Explanatory Variables	223
5.1 Random Explanatory Variables and the Instrumental Variables Method.....	223
5.1.1 Instrumental Variables Estimator	224
5.1.2 The Hausman (1978) Specification Test	226
5.1.3 Application Example: Measurement Error	226
5.2 Multicollinearity and Variable Selection	228
5.2.1 Presentation of the Problem	228
5.2.2 The Effects of Multicollinearity	229
5.2.3 Detecting Multicollinearity	231
5.2.4 Solutions to Multicollinearity	236
5.2.5 Variable Selection Methods	238
5.3 Structural Changes and Indicator Variables	241
5.3.1 The Constrained Least Squares Method	242
5.3.2 The Introduction of Indicator Variables	243
5.3.3 Coefficient Stability Tests	251
Conclusion	261
The Gist of the Chapter	262
Further Reading	262
Appendix: Demonstration of the Formula for Constrained Least Squares Estimator	263
6 Distributed Lag Models	265
6.1 Why Introduce Lags? Some Examples.....	265
6.2 General Formulation and Definitions of Distributed Lag Models	268
6.3 Determination of the Number of Lags and Estimation	270
6.3.1 Determination of the Number of Lags	270
6.3.2 The Question of Estimating Distributed Lag Models	271
6.4 Finite Distributed Lag Models: Almon Lag Models	271
6.5 Infinite Distributed Lag Models	273
6.5.1 The Koyck Approach	273
6.5.2 The Pascal Approach	279
6.6 Autoregressive Distributed Lag Models	281
6.6.1 Writing the ARDL Model	281
6.6.2 Calculation of ARDL Model Weights	282
6.7 Empirical Application	283
Conclusion	285
The Gist of the Chapter	285
Further Reading	285

7 An Introduction to Time Series Models	287
7.1 Some Definitions	287
7.1.1 Time Series	287
7.1.2 Second-Order Stationarity	289
7.1.3 Autocovariance Function, Autocorrelation Function, and Partial Autocorrelation Function	289
7.2 Stationarity: Autocorrelation Function and Unit Root Test	293
7.2.1 Study of the Autocorrelation Function	293
7.2.2 TS and DS Processes	297
7.2.3 The Dickey-Fuller Test	302
7.3 ARMA Processes	312
7.3.1 Definitions	313
7.3.2 The Box and Jenkins Methodology	317
7.3.3 Empirical Application	321
7.4 Extension to the Multivariate Case: VAR Processes	327
7.4.1 Writing the Model	327
7.4.2 Estimation of the Parameters of a $VAR(p)$ Process and Validation	329
7.4.3 Forecasting VAR Processes	330
7.4.4 Granger Causality	331
7.4.5 Empirical Application	332
7.5 Cointegration and Error-Correction Models	336
7.5.1 The Problem of Spurious Regressions	336
7.5.2 The Concept of Cointegration	338
7.5.3 Error-Correction Models	339
7.5.4 Estimation of Error-Correction Models and Cointegration Tests: The Engle and Granger (1987) Approach	340
7.5.5 Empirical Application	344
Conclusion	348
The Gist of the Chapter	348
Further Reading	349
8 Simultaneous Equations Models	351
8.1 The Analytical Framework	351
8.1.1 Introductory Example	353
8.1.2 General Form of Simultaneous Equations Models	355
8.2 The Identification Problem	357
8.2.1 Problem Description	357
8.2.2 Rank and Order Conditions for Identification	358
8.3 Estimation Methods	362
8.3.1 Indirect Least Squares	363
8.3.2 Two-Stage Least Squares	363
8.3.3 Full-Information Methods	365
8.4 Specification Test	367

8.5	Empirical Application	368
8.5.1	Writing the Model	368
8.5.2	Conditions for Identification	369
8.5.3	Data.....	370
8.5.4	Model Estimation	370
	Conclusion.....	376
