Preface.....x

About the Authorxi

1 Introduction1

 Levels of Measurement1

 Populations and Samples/Parameters and Statistics2

 Descriptive and Inferential Statistics.....4

 Graphing4

 Outliers.....4

 Measures of Central Tendency.....5

 Measures of Variation7

 Skewness and Kurtosis8

 The Normal Distribution.....11

 Standardized Scores14

 Statistical Inference.....16

 Type I Error, Type II Error, and Statistical Power17

 Summary.....19

2 Theoretical Foundation20

 Sampling Distributions.....20

 Example Data.....23

 Rank-Based Methods24

 Trimmed and Winsorized Estimators25

 M Estimators.....26

 The bootstrap.....27

 Permutation Methods.....28

 Bayesian Estimation29

 Summary.....35

3 One-Sample Parameter Estimation.....37

 Exploration of the Data38

 One-Sample *t*-Test and Confidence Interval for the Mean.....42

 Confidence Interval46

 Assessment of Assumptions48

 Sign Test and Wilcoxon Signed Rank Test51

 One-Sample Confidence Interval for the Median53

 One-Sample Confidence Interval for Trimmed
 and Winsorized Means.....55

Confidence Intervals for M-Estimators Measures of Central Tendency.....	56
Bayesian Credibility Intervals for Measures of Central Tendency.....	57
Effect Size Estimation.....	62
Cohen's <i>d</i> Effect Size	62
Hedges' <i>g</i>	63
Nonparametric Effect Sizes	64
Summary.....	65
4 Comparing Measures of Central Tendency between Two Independent Groups	67
Motivating Example	67
Exploration of the Data	68
Independent Sample <i>t</i> -Test	70
Assessment of Assumptions	75
Welch's <i>t</i> -Test.....	77
Wilcoxon Test and Mann-Whitney <i>U</i>	78
Bootstrap-Based Test for Comparing Central Tendency for Two Groups.....	83
Yuen-Welch Test for Comparing Trimmed Means	84
Permutation Test to Compare Means for Two Groups	85
Bayesian Comparison of Central Tendency for Two Groups	86
Effect Size Estimation.....	90
Summary.....	94
5 Comparing Measures of Central Tendency among More Than Two Independent Groups.....	96
Motivating Example	96
Exploration of the Data	97
Analysis of Variance.....	99
Assessment of Assumptions	104
Post Hoc Testing.....	105
Planned Comparisons.....	110
Welch ANOVA.....	111
Kruskal-Wallis Test.....	113
Bootstrap-based Analysis of Variance.....	114
Comparison of Trimmed Means for More Than Two Groups.....	115
Comparison of Medians for More Than Two Groups Using McKean-Schrader Estimate of the Standard Error.....	118
Permutation Test for Comparing Means from More Than Two Groups.....	120
Bayesian Comparison of Means for More Than Two Groups	121
Effect Size Estimation.....	123
Summary.....	128

6 Factorial Designs	130
Motivating Example	130
Exploration of the Data	131
Factorial Analysis of Variance	133
Assessing Assumptions	137
Post Hoc Pairwise Comparisons	140
Factorial ANOVA Using Welch's <i>F</i> -Test	141
Rank-Based Methods for Factorial ANOVA	142
Bootstrap-Based Methods for Factorial ANOVA	147
Comparing Trimmed Means for Factorial ANOVA	149
Comparing Medians for Factorial ANOVA	152
Permutation Tests for Factorial ANOVA	154
Bayesian Factorial ANOVA	155
Effect Size Estimates	160
Summary	162
7 Comparing Means for Repeated Measures Analysis of Variance and Split-Plot Designs	164
Assumptions Underlying Repeated Measures ANOVA Models	167
Example of Parametric Repeated Measures Analysis	168
Assumption Check for Repeated Measures and Split-Plot ANOVA	173
Friedman's Test	176
Trimmed Means	180
The Bootstrap	182
The Permutation Test	183
Summary	185
8 Correlation	186
Pearson's Correlation Coefficient	186
Spearman's Rho	190
Kendall's Tau	190
<i>M</i> Correlations	191
Biweight Midcovariance	192
Winsorized Correlations	193
Bayesian Correlation Estimation	194
Example of Correlation Coefficients	194
Biserial and Point Biserial Correlations for Dichotomous Data	196
Phi and Cramer's <i>V</i> Coefficients	197
Comparing Correlation Coefficients from Independent Samples	198
Summary	201
9 Ordinary Least Squares Linear Regression	203
Motivating Example	204
Exploration of the Data	204
Ordinary Least Squares Regression	206

Estimating Regression Models with Ordinary Least Squares	207
Distributional Assumptions Underlying OLS Estimation.....	208
Coefficient of Determination.....	208
Inference for Regression Parameters.....	209
Identification of Influential Cases.....	211
Simple Linear Regression Example.....	214
Multiple Regression.....	224
Multiple Regression Example	226
Summary.....	231
10 Robust Linear Regression Models	233
Rank-Based Regression Estimator.....	234
Least Absolute Deviation Regression	235
Least Trimmed Squares Regression.....	235
Least Trimmed Absolute Value Regression	235
Least Median of Squares Regression	236
Huber's M Estimator Regression	236
Coakley-Hettmansperger Estimator Regression.....	237
S Estimator Regression	238
Bayesian Regression Estimation	239
Permutation-Based Regression	241
Regression Models for Dispersion, Skew, and Kurtosis.....	241
Application of Robust Methods	243
Summary.....	249
11 Regression for Dichotomous Dependent Variables	252
Logistic Regression Model for a Dichotomous Outcome Variable.....	253
Logistic Regression Example.....	257
Bayesian Logistic Regression	258
Other Models for Dichotomous Outcomes	262
Examples Using Models with Alternative Models for Dichotomous Data	265
Summary.....	272
12 Advanced Issues in Regression Modeling	273
Introduction.....	273
Variable Selection.....	274
Stepwise Regression	275
Best Subsets Regression	276
Regularized Estimation	276
The Ridge Estimator	278
The Elastic Net Estimator	279
Example of Variable Selection.....	279
Bayes Model Averaging	281

Nonlinear Model Estimation	283
Example of Nonlinear Models	286
Moderation and Mediation.....	287
Dominance Analysis	294
Example of Dominance Analysis	296
Regression with Time-Dependent Data	296
Summary.....	304
13 Multilevel Modeling.....	306
Intraclass Correlation	307
Multilevel Linear Models	309
Random Intercept Model.....	310
Random Slopes Model	311
Centering.....	313
Basics of Parameter Estimation with MLMs.....	314
Assumptions Underlying MLMs.....	315
Extending 2 Level MLMs.....	316
Estimating the Variance in the Dependent Variable Accounted for by the MLM	317
Multilevel Model Example	319
Identifying Potential Outliers in Single-Level Data	324
Identifying Potential Outliers in Multilevel Data	326
Identifying Potential Multilevel Outliers for the Example	328
Robust Estimation for Multilevel Models	334
Rank-Based Methods for Fitting MLM.....	336
Bayesian Multilevel Modeling	338
Example of Fitting Robust, Rank-Based, and Bayesian Estimators for Multilevel Data.....	338
Robust MLM Estimation.....	338
Rank-Based MLM Estimation	340
Bayesian MLM Estimation.....	342
Summary.....	348
References	350
Index	355
