1	Second-Price Auctions	1
	Introduction	1
	Exercise #1.1: Second-Price Auction with Complete Information ^A	3
	Exercise #1.2: Second-Price Auctions Under Incomplete Information ^B	4
	Exercise #1.3: Second-Price Auctions Under Incomplete Information and Discrete Valuations ^B	7
	Exercise #1.4: Robustness of Equilibrium Bidding in the Second-Price Auction ^A	9
	Exercise #1.5: Efficiency in Second-Price Auctions ^A	10
	Exercise #1.6: Second-Price Auction with Two Risk-Averse Bidders ^A	11
	Exercise #1.7: Bidding Behavior in the English Auction ^A	12
	Exercise #1.8: Expected Revenue in the Second-Price Auction ^C	13
	Exercise #1.9: Second-Price Auction with Non-Uniformly Distributed Valuations ^B	18
	Exercise #1.10: Second-Price Auctions with Reservation Prices ^A	20
	Exercise #1.11: Second-Price Auctions with Entry Fees ^B	21
	Exercise #1.12: Asymmetric Bidding Equilibria in the Second-Price Auction ^B	24
	Exercise #1.13: Collusion in Second-Price Auctions, Based on Graham and Marshall (1987) ^A	26
	Exercise #1.14: Second-Price Auctions with Budget Constrained Bidders, Based on Che and Gale (1998) ^B	27
2	First-Price Auctions	31
	Exercise #2.1: First-Price Auction Under Complete Information ^A	33
	Exercise #2.2: Bidding one's valuation in FPAs ^A	34
	Exercise #2.3: First-Price Auction with Only Two Bidders and Uniformly Distributed Valuations ^A	34
	Exercise #2.4: First-Price Auction with $N \geq 2$ Bidders and Uniformly Distributed Valuations ^A	37
	Exercise #2.5: First-Price Auction with Generic Distribution of Valuations—The Direct Approach ^B	41

Exercise #2.6: First-Price Auction with Uniformly or Exponentially Distributed Values ^B	44
Exercise #2.7: First-Price Auction with Generic Distribution of Valuations—The Envelope Theorem Approach ^C	50
Exercise #2.8: Finding Equilibrium Bid of Risk-Averse Bidders Under Asymmetric Distribution ^B	53
Exercise #2.9: Efficiency in First-Price Auctions ^A	55
Exercise #2.10: The First-Order Statistic ^B	56
Exercise #2.11: The Second-Order Statistic ^B	59
Exercise #2.12: The k th-Order Statistic ^C	63
Exercise #2.13: Bidding Behavior in the Dutch Auction ^A	67
3 First-Price Auctions: Extensions	71
Introduction	71
Exercise #3.1: Expected Revenue in the First-Price Auction—Direct Proof ^B	72
Exercise #3.2: Expected Revenue in the First-Price Auction—Proof Using the First-Order Statistic ^C	80
Exercise #3.3: Expected Payment in the First-Price Auction ^B	82
Exercise #3.4: First-Price Auction with Risk-Averse Bidders—An Introduction ^A	84
Exercise #3.5: First-Price Auction with Risk-Averse Bidders—General Setting ^B	88
Exercise #3.6: Efficiency with Risk Aversion ^A	92
Exercise #3.7: FPA with Two Risk Averse Bidders ^A	96
Exercise #3.8: First-Price Auction with Asymmetrically Distributed Valuations ^B	98
Exercise #3.9: Finding Expected Revenue in a First-Price Auction Under Asymmetric Distributions ^B	103
Exercise #3.10: Sequential Version of the First-Price Auction ^A	104
Exercise #3.11: First-Price Auctions with Reservation Prices—One Bidder ^A	105
Exercise #3.12: First-Price Auctions with Reservation Prices—Several Bidders ^C	107
Exercise #3.13: First-Price Auction with Entry Fees ^C	116
Exercise #3.14: First-Price Auction with Discrete Valuations ^B	126
Exercise #3.15: Collusion in First-Price Auctions, Based on McAfee and McMillan (1992) ^B	132
Exercise #3.16: First-Price Auctions with Budget Constrained Bidders, Based on Che and Gale (1998) ^B	136
4 All-Pay Auctions and Auctions with Asymmetrically Informed Bidders	145
Introduction	145
Exercise #4.1: All-Pay Auction Under Complete Information, Based on Baye et al. (1996) ^B	146

Exercise #4.2: Shading Your Bid in All-Pay Auctions ^A	149
Exercise #4.3: Testing a Bidding Function in a First-Price, All-Pay Auction ^A	151
Exercise #4.4: Finding the Equilibrium Bidding Function in the First-Price All-Pay Auction Using the Envelope Theorem Approach ^C ...	152
Exercise #4.5: Finding the Equilibrium Bidding Function in the First-Price All-Pay Auction Using the Direct Approach ^B	164
Exercise #4.6: Finding Equilibrium Bid of All-Pay Auction Under Asymmetric Distributions ^B	166
Exercise #4.7: Efficiency in All-Pay Auctions ^A	169
Exercise #4.8: Finding the Expected Revenue in the First-Price All-Pay Auction ^B	170
Exercise #4.9: Expected Revenue in an All-Pay Auction with Asymmetrically Distributed Values ^C	174
Exercise #4.10: Finding Equilibrium Bids in the Second-Price All-Pay Auction ^B	175
Exercise #4.11: Equilibrium Bids in the Second-Price All-Pay Auction - Allowing for Non-Uniformly Distributed Valuations. ^B	181
Exercise #4.12: Finding the Expected Revenue in the Second-Price All-Pay Auction. ^C	183
Exercise #4.13: War of Attrition ^A	188
Exercise #4.14: Asymmetrically Informed Risk-Neutral Bidders, Based on Kim and Che (2014) ^B	191
Exercise #4.15: Asymmetrically Informed Risk-Averse Bidders, Based on Orozco-Aleman and Munoz-Garcia (2011) ^B	197
5 Third-Price Auctions, <i>k</i>th-Price Auctions, and Lotteries	205
Exercise #5.1: Third-Price Auction, A Numerical Example ^A	206
Exercise #5.2: Finding the Equilibrium Bidding Function in a Third-Price Auction ^C	207
Exercise #5.3: Equilibrium Bidding Function in a Third-Price Auction with Uniformly or Exponentially Distributed Values ^B	210
Exercise #5.4: Finding Equilibrium Bid of Third-Price Auction Under Asymmetric Distribution ^B	217
Exercise #5.5: Shading Your Bid in <i>k</i> th-Price Auction ^A	219
Exercise #5.6: <i>k</i> th-Price Auction ^C	220
Exercise #5.7: Efficiency in <i>k</i> th-Price Auctions ^A	225
Exercise #5.8: Lottery Auction, An Introduction ^A	225
Exercise #5.9: Lottery Auction, A More General Approach ^B	226
Exercise #5.10: Efficiency in Lottery Auctions ^A	230
6 The Revenue Equivalence Principle	231
Exercise #6.1: Revenue Comparison in Four Auction Formats ^A	232
Exercise #6.2: Revenue Comparison Between First- and Second-Price Auctions ^B	237

Exercise #6.3: The Revenue Equivalence Principle with Risk Averse Bidders ^A	240
Exercise #6.4: The Revenue Equivalence Principle with Risk Averse Sellers ^B	242
Exercise #6.5: Comparison of First- and Second-Price Auctions ^A	245
Exercise #6.6: Revenue Equivalence Theorem—Short Proof ^B	246
Exercise #6.7: Revenue Equivalence Theorem—Longer Proof ^C	249
7 Common-Value Auctions	253
Exercise #7.1: The Winner's Curse in Common-Value Auctions—Introduction ^A	254
Exercise #7.2: Equilibrium Bidding in Common-Value Auctions with Two Bidders ^B	255
Exercise #7.3: Equilibrium Bidding in Common-Value Auctions with $N \geq 2$ Bidders ^C	257
Exercise #7.4: First-Price Auction When Bidders Have Interdependent Values ^B	262
Exercise #7.5: Second-Price Auction When Bidders have Interdependent Values ^B	266
Exercise #7.6: Revenue Comparison in Auctions When Bidders Have Interdependent Values ^B	270
8 Multi-Unit Auctions	273
Introduction	273
Exercise #8.1: First-Price Auction Selling Multiple Units (Discriminatory Auction) ^A	274
Exercise #8.2: Second-Price Auction Selling Multiple Units (Uniform-Price Auction) ^A	274
Exercise #8.3: Second-Price Auction Selling Multiple Units, Allowing for Different Prices ^B	275
Exercise #8.4: Divide Bidders and Conquer in a First-Price Auction ^B ..	281
Exercise #8.5: Divide Bidders and Conquer in a Second-Price Auction ^A	283
Exercise #8.6: Multi-Unit Auction with a Gift to Losing Bidders ^A	284
9 Mechanism Design	287
Exercise #9.1: Incentives to Truthfully Reveal Valuations ^A	288
Exercise #9.2: First-Price Auction as a Direct Revelation Mechanism ^B	289
Exercise #9.3: Second-Price Auction as a Direct Revelation Mechanism ^A	291
Exercise #9.4: VCG Mechanism Selling a Single Unit ^B	293
Exercise #9.5: VCG Mechanism Selling Several Units ^B	296
Exercise #9.6: VCG Mechanism and the Generalized Second-Price Auction ^B	297
Exercise #9.7: A Seller Using Uniform Prices or Menus ^B	301

10 Procurement Auctions	305
Exercise #10.1: Procurement Auctions Under Complete Information ^A	306
Exercise #10.2: Procurement Auctions Under Incomplete Information ^B	309
Exercise #10.3: Procurement Auctions with External Effects, Based on Choi et al. (2018) ^C	315
Exercise #10.4: Procurement Auctions with Perfect Monitoring ^B	321
Exercise #10.5: Procurement Auctions with Imperfect Monitoring ^C	327
A Game Theory Appendix	337
Background	337
Dominated Strategies	338
Nash Equilibrium	339
Mixed-Strategy Nash Equilibrium	340
Subgame Perfect Equilibrium	342
Bayesian Nash Equilibrium	343
B Statistical Appendix	345
Random Variables	345
Discrete and Binary Random Variables	345
Discrete and Non-Binary Random Variables	346
Continuous Random Variable	346
Typical Distribution Functions	346
Uniform Distribution	346
Non-Uniform Distribution	347
Exponential Distribution	349
Moments of a Distribution	350
First Moment	350
Second Moment	351
Stochastic Dominance	352
First-Order Stochastic Dominance	352
Second-Order Stochastic Dominance	352
C Mathematical Appendix	355
Differentiation	355
List of Common Derivatives	355
Integration	358
List of Common Integrals	358
References	365
Index	367
