

Contents

1 Introduction to the Healthcare Operations Management	1
1.1 Trends in the Development of Medical Management	2
1.2 From Clinical Pathways to Diagnosis and Treatment Chains	4
1.3 The Blueprint and the Moment of Truth in Medical Services	5
1.4 The Operations Management Issues in Medical Services	7
1.4.1 The Improvement of Medical Service Processes	7
1.4.2 Medical Resource Allocation Management	9
1.4.3 Application of Information Technology in Medical Services	11
1.4.4 Medical Service Quality Management	13
1.5 Main Contents and the Chapter Structure of This Book	14
References	16
2 Research on the Optimal Deployment of First Aid Stations and Ambulances Considering the Temporal and Spatial Stochasticity of Demand	19
2.1 Quantitative Description and Analysis of Spatiotemporal Stochasticity of Demand for Emergency Medical Services	20
2.1.1 Stochasticity of EMS Demand in the Spatial Dimension	20
2.1.2 Stochasticity of EMS Demand in the Temporal Dimension	23
2.2 Location Selection for Ambulance Stations Considering Spatiotemporal Stochasticity of Demand	26
2.2.1 Problem Description	27
2.2.2 Model Construction	27
2.2.3 Treatment of Random Variables	29
2.2.4 Case Analysis and Discussion	31
2.3 Allocation of Ambulance Considering Spatiotemporal Stochasticity of Demand	36
2.3.1 Problem Description	36
2.3.2 Model Construction	36

2.3.3	Case Analysis and Discussion	39
	References	43
3	Improving Diagnostic Accuracy Based on Multiple Cutoff Levels of Multiple Tumour Markers	45
3.1	Colorectal Cancer and Its Diagnostic Methods	45
3.1.1	Diagnosis of Colorectal Cancer	45
3.1.2	Indexes and Accuracy of Diagnosis	46
3.2	Algorithm for Setting Multiple Cutoff Levels Based on GA and Rough Set Theory	47
3.2.1	Basic Concept of the Rough Set	47
3.2.2	Rough Set Theory-Based Diagnostic Accuracy Evaluation	48
3.2.3	Algorithm Design Based on the GA and Rough Set	49
3.3	Application Example	53
3.3.1	Data Collection and Detection Methods	53
3.3.2	Algorithm Application Results	55
3.3.3	In-Depth Comparison Analysis	58
	References	61
4	Robust Optimisation for Multiple Medical Service Project Scheduling Considering the Uncertainty of Activity Durations and Resource Allocation	63
4.1	Introduction to the Multiple Project Scheduling and the Robust Optimisation	63
4.1.1	Multiple Project Scheduling	63
4.1.2	The Robust Optimisation	64
4.2	Model Formulation	65
4.2.1	Multiple Objective Scheduling Model of Medical Service Projects	65
4.2.2	The Robust Optimisation Model of Medical Service Projects	68
4.3	Algorithm Design	68
4.4	Case Analysis	71
4.4.1	Data Collection	71
4.4.2	Determination of Relevant Parameters and Calculation of Scheduling Schemes	73
4.4.3	Discussion on the Value of the Coefficient of Variance	77
	References	78
5	Study on Home Care Scheduling with Considerations of the Patient Satisfaction and Operation Costs	81
5.1	Home Care Systems and Their Scheduling Needs	81
5.1.1	Home Care Practices Abroad	81
5.1.2	Home Care Practices in China	83

5.1.3	Scheduling Problem in Home Care Services	84
5.2	Optimal Modelling Considering Patient Satisfaction and Care Costs	87
5.2.1	Description of the Bi-objective Model	87
5.2.2	Solving the Model Using the ϵ -Constraint Algorithm	92
5.3	Design of a Fast Algorithm and Its Numerical Analysis	96
5.3.1	Flowchart of the NSGA-II Algorithm	96
5.3.2	Framework of the Random Assignment Algorithm	99
5.3.3	Numerical Analysis	101
	References	109
