Contents

1. Frames of Reference

1.1 Introduction 1
1.2 Frames of Reference 4
1.3 Transition Matrices 6
1.4 Euler Angles 9
1.5 Angular Velocity 12
1.6 The Coriolis Theorem 14
1.7 Rotating, Accelerating, and Inertial Frames 18
1.8 The Rotation of the Earth 24
1.9 The Kinematics of Rigid Bodies 28

2. One Degree of Freedom

2.1 The Equation of Motion 35
2.2 The Phase Plane 36
2.3 Phase Space and Extended Phase Space 43
2.4 Constrained Systems 45
2.5 Lagrange's Equation 52
2.6 Conservation of Energy 53
2.7 The Calculus of Variations 54
2.8 One-Parameter Variations 59
2.9 Hamilton's Principle 60
2.10 Change of Coordinates 62

3. Lagrangian Mechanics

3.1 Several Degrees of Freedom 67
3.2 Configuration Space and Phase Space 68

3.3 Coordinate Transformations 70
3.4 Transformation of the Equations of Motion 74
3.5 Generalized Forces 77
3.6 Lagrange's Equations 81
3.7 Holonomic Constraints 87
3.8 External and Constraint Forces 90
3.9 Stationary Action 96

4. Noether's Theorem
4.1 Ignorable Coordinates 99
4.2 One-Parameter Transformation Groups 101
4.3 Conservation of Energy 107
4.4 Momentum Principles 108
4.5 Relative Angular Momentum 111

5. Rigid Bodies
5.1 Rigid Body Motion 115
5.2 Kinetic Energy 116
5.3 The Inertia Matrix 117
5.4 Linear and Angular Momentum 123
5.5 Rotation About a Fixed Point 125
5.6 Lagrange's Equations 132
5.7 Nonholonomic Constraints 140

6. Oscillations
6.1 Simple Harmonic Motion 147
6.2 Several Degrees of Freedom 147
6.3 Oscillations Near Equilibrium 156

7. Hamiltonian Mechanics
7.1 The Legendre Transformation 161
7.2 Hamilton's Equations 164
7.3 Poisson Brackets 168
7.4 Canonical Transformations 169
7.5 Infinitesimal Canonical Transformations 175
7.6 The Hamilton–Jacobi Equation 175

8. Geometry of Classical Mechanics
8.1 Coordinate Choices 183
8.2 Manifolds 184
8.3 Tangent Vectors 187
8.4 The Tangent Bundle 191
8.5 Functions and Differential Forms 192

8.6 Operations on Differential Forms 196
8.7 Vector Fields and Flows 201
8.8 Commuting Flows 204
8.9 Lagrangian and Hamiltonian Dynamics 205
8.10 Symmetry and Conservation Laws 209
8.11 Symplectic Manifolds 210
8.12 Darboux's Theorem 216
8.13 Integrability 217

9. Epilogue: Relativity and Quantum Theory
9.1 The Relevance of Classical Mechanics 225
9.2 Relativity 225
9.3 Quantum Theory 226

Notes on Exercises
